Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "a frame" with all the elements (e.g. a belt spool, locking members..etc.) attached to the frame must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112 1st Paragraph

The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 3654

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 3 and 10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. How is the first locking catch constructed/produced from a flexible material?

Because of the insufficiency of the disclosure, claims 3 and 10 cannot be meaningfully treated with respect to the prior art at this time.

Claim Rejections - 35 USC § 112 2nd Paragraph

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 is vague and indefinite because it is not understood what is meant by the recitation of connection the catches "by a predetermined breaking point."

Because of the indefiniteness, claim 4 cannot be meaningfully treated with respect to the prior art at this time.

Claim Rejections - 35 USC § 102

Art Unit: 3654

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 5-8 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Heath, U.S. Patent No. 3834646.

With respect to claims 1, 5 and 9, Heath '068 shows a frame (12) and a belt spool (28) mounted in said frame; first and second locking wheels (21, 24) and first and second locking catch (20, 23) engaging respectively and spaced apart (claim 2) able to position into non-locking and locking modes, and a spring (32, see figures 8-10, rotating each disc together and the disk contains first and second wheels) is provided (claim 8), each locking catch has a point of rotation (no reference numbers) and able to swing perpendicularly on each tooth face respectively (no reference numbers) from the point of contact, and the first locking catch (20) runs between said point of rotation and a rotation axis of said belt spool (28), and the second locking catch (23) runs on the side of point of rotation facing away from said rotation axis of said belt spool (28), see figure 1.

With respect to claims 6-7, Heath '646 shows each locking wheel and each locking catch with a different cut (i.e. the teeth for each wheel, as well as each locking catch has its own respective pitch or cut), see figure 1.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
